Another concern is the potential for loss of personal interaction. While video can bridge geographical distances, it cannot fully replicate the nuanced communication and feedback possible in an in-person setting. We can expect to see further integration of virtual reality (VR) and augmented reality (AR), offering artists immersive experiences that transcend the limitations of traditional video. This technology could create highly realistic virtual models, providing artists with unprecedented control over pose, lighting, and environment. Furthermore, the use of artificial intelligence (AI) in video analysis could provide valuable feedback and insights to artists.
