Simplifying Complex Concepts through Analogies Many physical science concepts can be challenging to grasp Using analogies can significantly simplify understanding For example Electric Current Imagine water flowing through a pipe The current is the amount of water flowing per second voltage is the water pressure and resistance is the pipes narrowness Higher pressure voltage leads to more water flow current while a narrower pipe resistance restricts the flow

Newtons Laws of Motion Think of a hockey puck on ice Newtons first law inertia states it will stay at rest or move at a constant speed unless a force acts on it Newtons second law  $F=ma$  demonstrates that a stronger push force will accelerate the puck more quickly Newtons third law states that for every action pushing the puck theres an equal and opposite reaction the puck pushing back on your hand

Wave Properties Imagine dropping a pebble into a still pond The ripples spreading outwards represent waves The distance between consecutive ripples is the wavelength and how frequently the ripples appear is the frequency
