fabric of spacetime caused by massive objects accelerating such as colliding black holes They were predicted by Einsteins general relativity and were finally detected in 2015 confirming a key aspect of the theory 4 Is there a Big Crunch coming The possibility of a Big Crunch where the universe eventually collapses under its own gravity is still under debate Current observations suggest the expansion of the universe is accelerating making a Big Crunch less likely However the future evolution of the universe is complex and still not fully understood 5 What can we learn from Einsteins work beyond cosmology Einsteins work has profound implications far beyond cosmology His theories have led to the development of technologies like GPS systems which rely on the effects of general relativity His work also inspires us to think critically challenge existing paradigms and embrace the beauty of the universe 3
