this book approaches the structure of english from a form function perspective that is both theoretical and practical it asks learners to consider meaning structure and use in contrast to many grammars that focus on structure sometimes to the exclusion of use and even meaning the book presents an extended introduction to areas of grammar that many would see as indispensable such as participial and infinitive phrases the analysis is largely achieved through form function tree diagramming and extends the structure to include finite and nonfinite predicates

the aim of this monograph is to give impetus to research into one of the central questions in discourse studies what makes a sequence of sentences or utterances a discourse the theoretical framework for describing the possibilities of discourse continuation is delineated by two principles the discursive and the dialogic principle the chord of discourse is unfolded in a tripartite wire conjunction adjunction and interjunction each containing three aspects leading to a connectivity model this new three by three taxonomy of discourse relations incorporates findings from several theories and approaches that have evolved over the last three decades including systemic functional linguistics and rhetorical structure theory in comparing this model to other models this book presents a state of the art of discourse relation analysis combined with detailed accounts of many examples this monograph furthermore proposes a new way of presenting discourse structures in connectivity graphs followed by eleven commandments for the segmentation and labeling of discourse and three procedures for disambiguation if more labels are applicable this study can provide a base for corpus linguistic analysis on discourse structures computational approaches to discourse generation and cognitive experimental research of discourse competence
