# Single and multi-room scene setting. Effortless lighting control.

Our new RAPID Scene Control solution with voice recognition, offers the ultimate in multi-room scene setting, for a wide range of applications.

Part of our RAPID Lighting Control System, scene control works in conjunction with RAPID dimming lighting control modules (LCMs) and dimming luminaires to achieve advanced scene-setting functionality across individual rooms and multiple floors.

Scene control can be operated using our latest touch screen technology, via a tablet or smartphone, and through a range of stylish scene select plates.

## Touch screen technology

Clients experience greater flexibility in lighting control by using the new cloud-based apps created by CP Electronics. Operated via Windows 10 tablets and smartphones\*, and available in iOS and Android on request, end users can instantly control lighting across individual rooms and multiple floors.

## Voice recognition

With the help of tried and trusted voice recognition technology, RAPID Scene Control offers complete, intuitive command of lighting effects, via a tablet device with microphone connection.

\*Windows 10 offers full functionality. Android and iOS have some limitations.

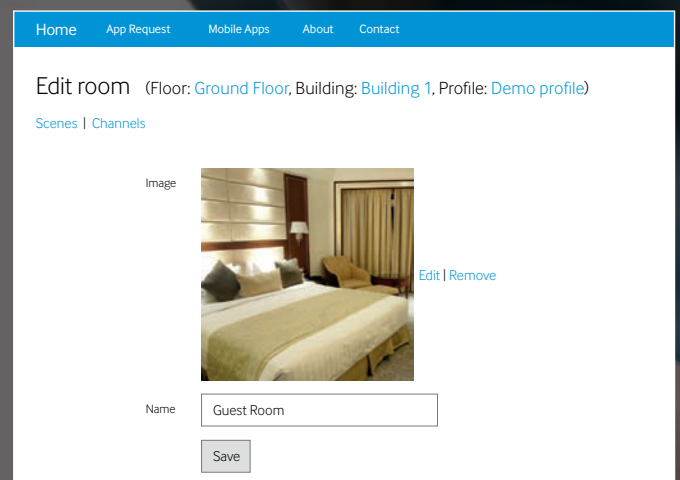

# Scene control configured to end user specification

As part of our commissioning process, we create a unique personal profile for clients and configure the system to their exact requirements. Through the app, occupants can view the rooms that can be controlled, and select a room to instantly set the scene.

## Room set-up:

Clients can go to 'Settings' to configure the app. Room images can be set as background and touch screen buttons, created for different scene-setting within a room\*.

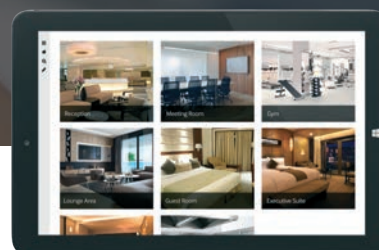

## Easy app customisation

Once the profile has been created, the client has the option to customize various elements. Through 'Settings', end users can:

- Update the background colour of the app
- Switch between different rooms
- Download profile settings from the cloud or a standalone XML file to an authorized device.

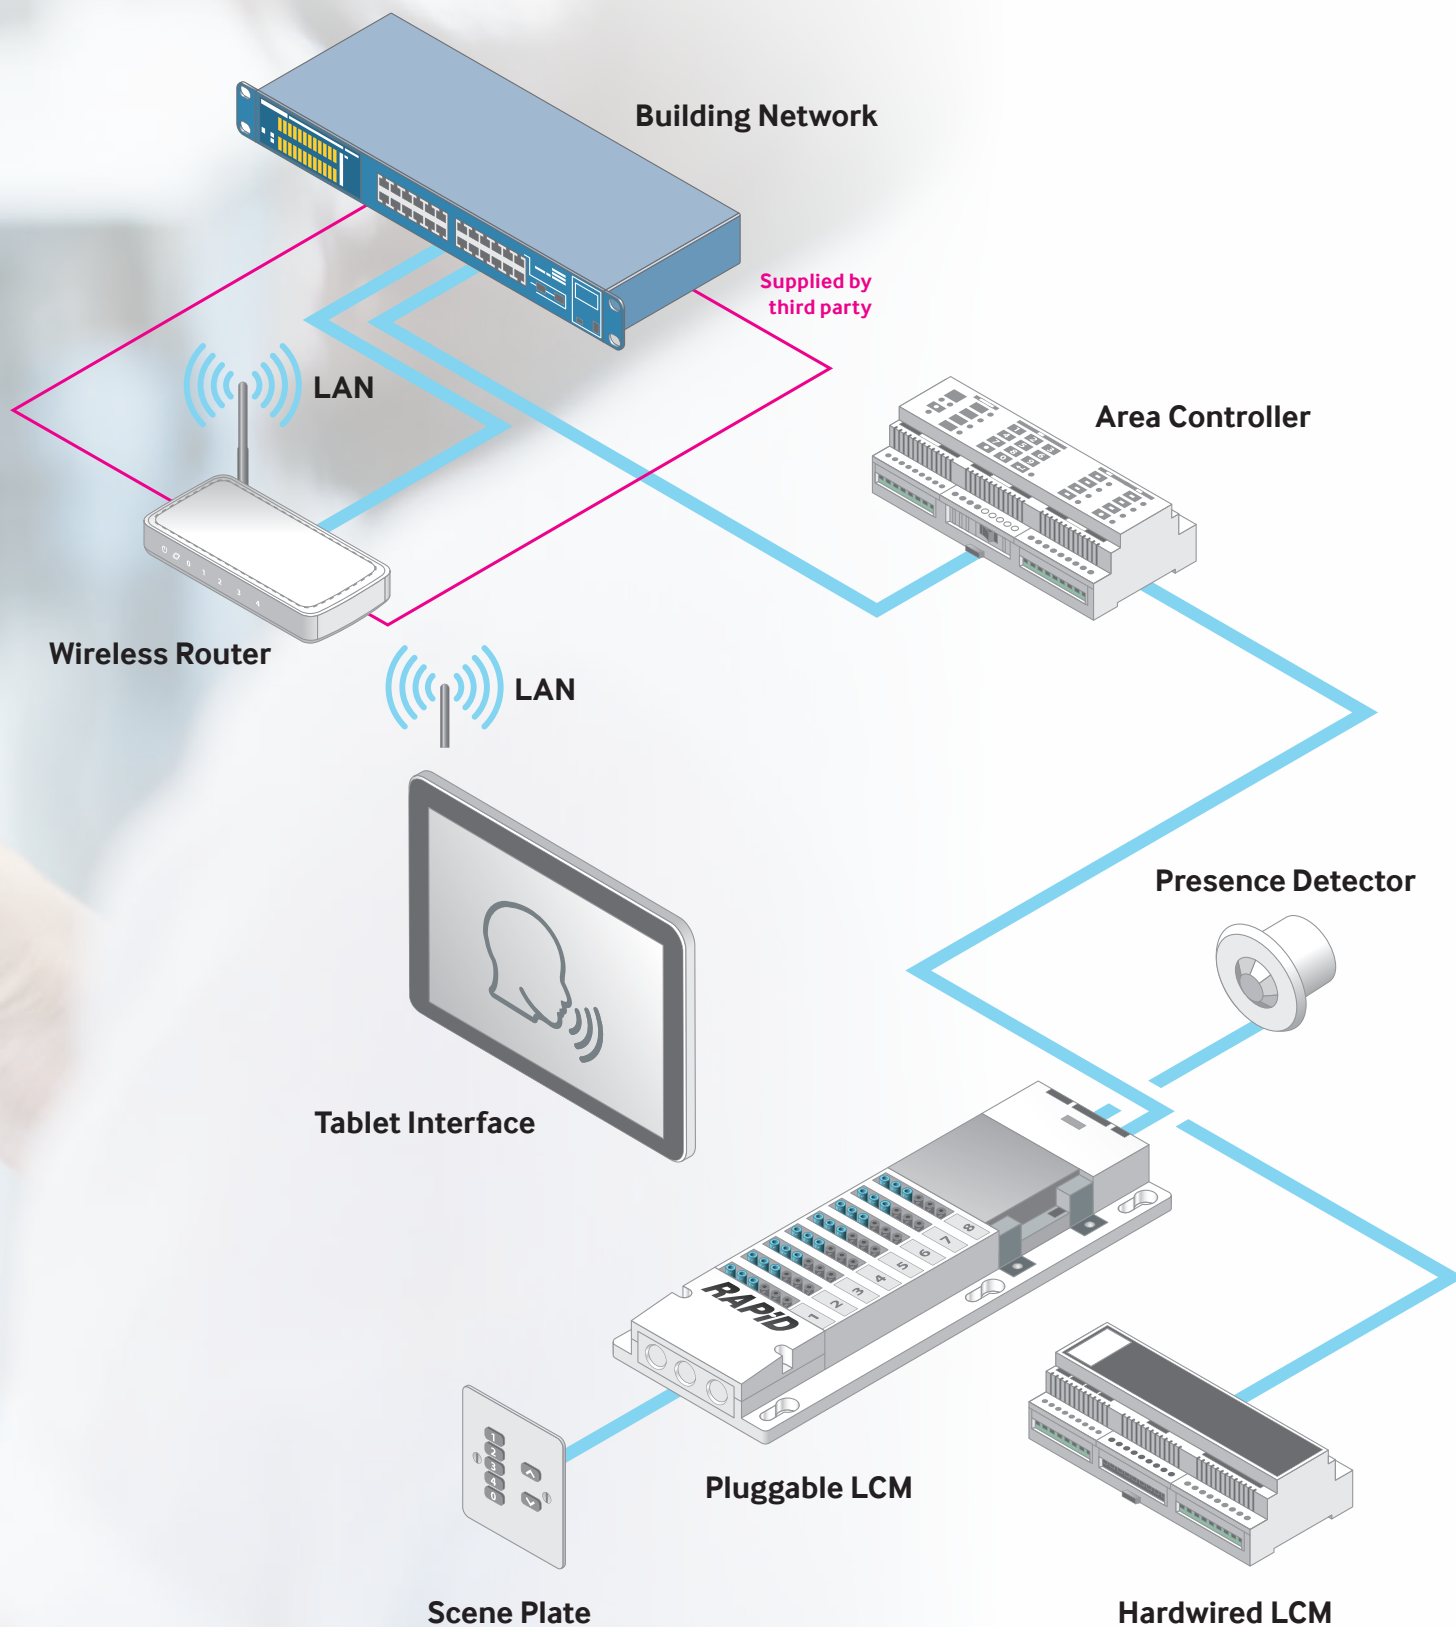

\* Functionality only available on Windows 10.

# Scene control through RAPID scene select plates

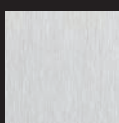

As part of our RAPID Lighting Control System, scene control can be operated through touchscreen technology, as well as our stylish range of scene select plates.

Our scene select plates can be programmed to meet end user's lighting requirements so scene control can be achieved by an end user within a room.

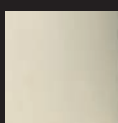

There are a range of button and plate finishes available:

White

Stainless Steel

Polished Brass

The RAPID scene setting plate range provides the following features:

- Up to 8 separate scene settings
- Up/down override
- Adjustable fade rates of up to 99 minutes for each scene
- Room divide capability
- Support for up to 99 individual dimming circuits
- IR support for scene selection and programming
- Keypad scene programming.
