

CP products meet the criteria of Enhanced Capital Allowance Scheme

The Scheme allows businesses to claim back 100% of their first year capital investments

Lighting control, when used effectively and efficiently, can save energy bill costs up to 40% and allows occupants to take control of their building and environment. Capital allowances enable businesses to write off the capital cost of purchasing new plant or machinery against their taxable profits.

In a bid to manage climate change, the Enhanced Capital Allowance (ECA) Scheme allows businesses to claim back 100% of their first year's capital investments providing the equipment meets the energy saving criteria agreed and managed by the Carbon Trust on behalf of the Government.

We are pleased to announce that CP Electronics' products qualify in accordance to the criteria. CP lighting control products meet the regulations under Energy Savings Lighting Control, and are eligible under the scheme for ECA.

Claims for ECA are made by businesses through their income or corporation tax process in the same way. However you must provide supporting evidence that you are using energy-saving equipment. On request, a letter from CP Electronics confirming that our products meet the current ECA Scheme eligibility criteria is available.
